## My Private Documents

**\$499.95 USD / Per Server**

# Who better than you knows where you wish to access your Private Documents?

---

## What is My Private Documents?

My Private Documents is a newly released web part for SharePoint Portal Server 2003 that can be added to any standard SharePoint site.

By adding the My Private Documents web part to a standard team site, all team members will receive a personalized view of their own "Private Documents" library. This allows them to manage personal documents and collaborate with team members on shared information from a single central location.

My Private Documents allows you to access and manage the "Private Documents" that are stored on your personal site from any page within the SharePoint portal environment. After all, who knows better than you, where you would like to access your documents from.

## Benefits of My Private Documents

- You decide where you would like to access your private documents.
- Access your private documents faster and easier than ever before.
- Easy to use and install.
