Trace

Price:
\$999.95 USD / Per Server

Tired of losing your document's version history while moving it from one library or team-site to another in SharePoint?

Trace extends SharePoint, allowing users to preserve a document's metadata and version history while moving between document workspaces, document libraries and team-sites.

Trace Capabilities

Menu System Additions

Cut, copy and paste options added to the existing drop down menu of a document and the document toolbar.

Cut and Copy

Copies a document's metadata and version history to a queue database.

Available across multiple browser sessions.

Paste

Creates or overwrites a document in the destination library.

Create Document Workspace

Preserve version history and metadata while creating document workspaces.

Administrative Utility

Administrators can create, delete, update and clean-up the database as well as enable/disable validation prompting.

Playground - Microsoft Internet Explorer

Document Version History Component
Playground

Type	Name	Modified	Modified By	Checked Out To	TestColumn
	A test	4/22/2005 8:48 AM			
		4/19/2005 2:14 PM			B
		4/22/2005 1:48 PM			Document With Two Versions

Paste Document - Microsoft Internet Explorer

Document Version History Component
Paste Document

A document in the destination library with the same name as the origin file currently exists. In addition, a conflict in field definitions was found between the origin document's library and the destination library.

Origin Document:
Destination Document:

Map columns with matching names and definitions and ignore other columns.
 Ignore all columns and paste only the document.
 Use the following column mappings:

Are you sure you want to paste this document and overwrite the destination file?

OK Cancel

Cut, Copy and Paste
